

When a user clicks the mouse

• When a webpage has loaded

• When an image has been loaded

- When the mouse moves over an element

• When an input field is changed

When Humanism is submitted

• When a user strokes a key

Events and Event Listeners

Triggering data script based on certain input

https://www.wv3scholar.com/js/jshtmldom_events.asp

• Event listener syntax:

```
element.addEventListener(event, function,  
useCapture);
```

• (We will see an example in just a bit)

- List of events (highly recommend you explore this, knowing these increases your possibilities for interaction)

Events and Event Listeners

Triggering Javascript based on a certain input

- When a user clicks the mouse
 - When a web page has loaded
 - When an image has been loaded
 - When the mouse moves over an element
 - When an input field is changed
 - When an HTML form is submitted
 - When a user strokes a key
- Event listener syntax:
`element.addEventListener(event, function, useCapture);`
 - (We will see an example in just a bit)
 - List of events (**highly recommend you explore this, knowing these increases your possibilities for interaction**)

Functions vs Methods

And how to write your own function!
