

**JavaScript Fundamentals**

**let allParentElementByTagName('p');**

• Assuming all Params is an array.....

**allPara[0].style.backgroundColor="orange";**

• will turn the first paragraph on an HTML document

**let myText=document.getElementById('div1');**

**• myText.innerText = "hello there";**

• will insert 'hello there' as the only content with id 'div1'

After declaring variables and selecting the  $\text{DGM}$ , how do we modify the  $\text{h}$ ?

# JavaScript Fundamentals

After declaring variables and selecting the DOM, how do we modify the html?

- **let allPara = document.getElementsByTagName("p");**
- Assuming allPara is an array....
- **allPara[0].style.background = "orange";**
- ...will turn the first paragraph orange on an HTML document
- **let myText = document.getElementById("div1");**
- **myText.innerText = "hello there";**
- ...will insert "hello there" as the only content in element with Id "div1"
